SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

SYSTEM OFF button: Turns off the power of the whole system: LDP, VTR, TV, and AUDIO.

LDP/VTR1/VTR2/VTR3/TV/AUDIO POWER buttons: Control the power of each unit. (The VTR button can be operative only

Installing Batteries

2

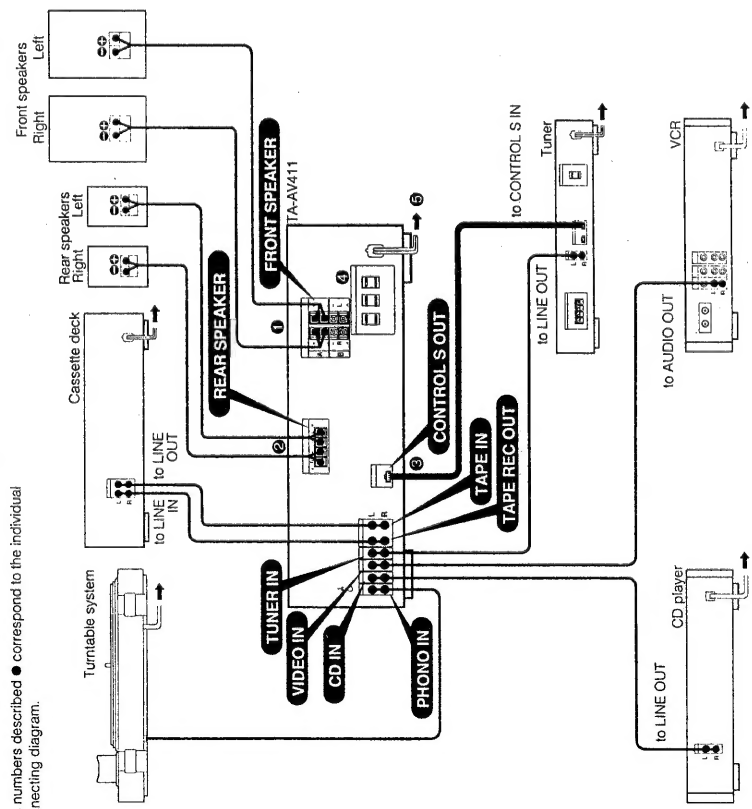

Two size-AA (R6) batteries

Connections

- Connect the AC power cord last. Make sure power is off.
- Cord plugs and jacks are color coded. Red plugs and jacks are for right channel (R) and white ones for the left channel (L).
- The cable connectors should be fully inserted into the jacks. A loose connection may cause hum and noise.
- The + and - cords of the speaker systems should be correctly connected to the + and - terminals of the amplifier respectively.

The numbers described ● correspond to the individual connecting diagram.

Note on speaker impedance and power capacity
This amplifier is designed to work best with speakers of nominal impedance from 8 to 16 ohms. Be sure to use a speaker system with adequate power handling capabilities.

To connect a video tape recorder
Use the following cables.

For stereo video tape recorder
RK-C74 phono plug x 2 – phono plug x 2
For monaural video tape recorder
RK-G105 mini plug x 1 – phono plug x 2
RK-C72 phono plug x 1 – phono plug x 2

1 Front speakers
You can connect two pairs of speaker systems: system A and system B. They can be selected individually or simultaneously with the selector on the front panel.

For left speaker
For right speaker

2 Rear speakers
Connect a pair of rear speaker systems for enjoying surround sound.

For left speaker
For right speaker

3 Flat remote control cord (not supplied)
Connect to the CONTROL S IN jack of other Sony equipment with the flat remote control cord for whole audio system remote control.

4 AC OUTLETS (SWITCHED)
Use these to power audio components whose power consumption is less than the wattage indicated on the AC outlets.
These outlets are controlled by the POWER switch.

CAUTION
Do not connect any electrical home appliances such as an electric iron, fan, TV or other high wattage equipment to these AC outlets.

5 Power cord
Connect to a wall outlet.

Push in until it clicks.
To disconnect.

Listening to a Program Source

Selecting the speaker system

To drive speaker system A: Set SPEAKERS to 'A'.

To drive speaker system B: Set SPEAKERS to 'B'.

To drive both speakers: Set SPEAKERS to 'A + B'.

For headphone listening only: Set SPEAKERS to 'OFF'.

Notes

- When SPEAKERS is set to 'A + B', two pairs of speaker systems must be connected. Otherwise, no sound can be heard.
- The sound of rear (surround) speakers are not heard from the headphone.

Enjoying Surround Sound

Selecting surround modes

DOLBY (Dolby Surround)

Expands sound just like listening to it in a movie theater.

HALL (Hall Surround)

Provides reverberation effect that is produced in a concert hall.

SIMULATED (Simulated Surround)

Gives a simulate stereo effect to monaural sound.

OFF (To disable surround effect)

The normal sound without surround effect will resume.

Note

No sound will be heard from the surround speakers, unless one of the Surround modes is selected.

Adjusting the INPUT BALANCE control

In the DOLBY SURROUND mode adjust this control so that the (audio) volume of the surround speaker is minimized during the scene of conversation (where the sound is monaural).

Recording

You can record any program source using a tape deck connected to the TAPE jacks.

The BALANCE, VOLUME, GRAPHIC EQUALIZER controls and the DBFB switch have no effect on recording.

(3) REAR MUTE PORT

The port is turned to "H" by switching to SURR ON, MODE or FUNCTION.

(Key input, Serial input)

Also the port is "H" three seconds after POWER ON is selected.

REAR MUTE PORT has priority over other ports to output when POWER OFF is selected and operates when SUB VOLUME is turned to ∞ .

However there is no output for the port switching the main FUNCTION when DRLC ON is selected.

(4) DRLC CONTROL PORT (used for SP relay too)

The port is turned to "H" only when DRLC ON is selected. (Key input, Serial input)

(5) POWER RELAY PORT

The port is turned to "H" when either POWER ON or DRLC ON is selected. (Key input, Serial input RM-1, RM-2) Both MAIN and SUB are turned OFF when ALL OFF serial input is selected.

(6) DOLBY PORT

The port is turned to "L" HALL or SIM is selected. (Key input, Serial input)

(7) SIM PORT

The port is turned to "L" when SIM is selected. (Key input, Serial input)

Key scan operation

- ① Key input has priority over serial input.
- ② If a key is input 10mS after the same key was input, this is recognized as a key input and registers five times.
- ③ Double-pressing is not accepted, one pressing first and being replaced by a second has priority.
- ④ No keys can be input during POWER OFF.
- ⑤ No keys can be input for 1 Second after POWER ON.

Input Address Port Timing SHORT MODE

In case of short mode, delay time setting is set in above timing. The data loaded to SDATA is written on the leading edge timing. In order to select that the data latch for row address strobe or column address strobe is loaded, SRAS or SCAS port is controlled.

When changing delay time setting, meaningless data on a memory are read. this causes the pop noise. when SRAS or SCAS is controlled, mute circuit (pin 55 is input, pin 56 is output) is activated. Mute time is the same as the delay time which is set at that time. (Serial data input mode only, On parallel data input mode, mute circuit is activated by using the mute control port pin 18.)

On long mode, input data number is 9, the way of setting delay time is same.

NOTE :

The components identified by mark Δ or dotted line with mark Δ are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms.
METAL: metal-film resistor
METAL OXIDE: Metal Oxide-film resistor
F: nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS
In each case, u: μ , for example:
uA...: μ A..., uPA..., μ PA...,
uPB..., μ PB..., uPC..., μ PC...,
uPD..., μ PD...
- CAPACITORS:
uF: μ F
- COILS
uH: μ H
